

Delmarva Restoration and Conservation Network Webinar
May 20, 2020

**Dan Murphy, U.S. Fish & Wildlife Service and
Josh Hastings, Lower Shore Land Trust**

Story Map - The map and some of the pictures take awhile to load if your internet is slow like mine.

Interactive Map - This interactive map has additional layers that are not included in the story map. These include boundaries and protected lands in addition to the state green infrastructure and nature's network layers that are av maps. The property layers do not have landowner information (which I removed for privacy reasons), but in most c parcel and map numbers. To access this information for a given parcel, you just right click on it. When you first o may need to click on "Contents" to see all of the layers. To add a layer to the map, just click on the box to the left o internet like mine it can take awhile for the layers to load. I think this map as is can be used for planning, so I'm goi targeting purposes while we continue to forge forward with drafting the Strategic Action Plan.
